EXPERIENCE

Software Development Engineer II, Amazon Pharmacy Nov 2024–Present | Boston, MA

- Built AI billing agent from POC to production advising pharmacists and technicians, scaling to 500k+ operational and 20k customer-facing queries per month; advised expansion to customer care (90k per month)
- Reduced agent cost and latency 40%+ through harness optimizations, validated via custom evaluations, LLM-as-judge, and backtesting
- Designed steering protocol enabling product team to self-serve agent behavior updates
- Partnered with compliance to define approved regions for AI inference under HIPAA; shepherded HIPAA and legal review for customer-facing launch
- Developed claims processing and customer-facing flows for the Medicare GLP-1 Bridge program, enabling thousands of eligible patients to access GLP-1s at a $50 monthly copay
- Automated insurance claim rejection fix-ups across 10k+ daily rejections, eliminating 100+ manual tasks per day for operations staff
- Led adoption of event-driven central workflow orchestrator; implemented first workflows
- Led efforts of 4 engineers to simplify continuous deployment systems and improve monitoring posture; closed critical monitoring gaps causing delays in medication dispensing

Software Development Engineer I, AWS Bedrock/Rekognition Aug 2022–Nov 2024 | Seattle, WA

- Operated multiple synchronous and asynchronous high-availability multi-region AWS services serving millions of API requests daily
- Performed thorough performance and accuracy profiling for CV models supporting image and video use cases; identified optimizations leading to 40% inference savings (Rekognition)
- Designed and implemented key asynchronous shared model processing workflows supporting a re:Invent service launch (Bedrock Data Analysis)
- Implemented backlog-aware scaling policies, reducing asynchronous job latencies by 30% and infrastructure cost by 10%/month
- Automated host software patching processes for compliance with FedRAMP and security requirements, saving 4+ days of effort per month
- Mentored intern who successfully built a solution automating Service Limit Increase evaluation process using a Claude-driven workflow

Software Development Engineer Intern, AWS Rekognition Jun 2021–Aug 2021 | Remote

- Developed automated quality evaluation test framework for computer vision models in collaboration with data scientists
- Integrated with existing CI/CD system to automatically evaluate and monitor model response quality
- Assisted intern tasked with evaluating quality against video models and datasets

SKILLS

Languages: Java, TypeScript, Python, Go

Agentic AI: Strands Agents, Bedrock, MCP, Langfuse, LLM-J, Backtesting

Architectures: Service-Oriented Architecture (Microservices), Infrastructure-as-Code (AWS CDK), Distributed Workflow Systems

EDUCATION

Haverford College Aug 2018–May 2022 | Haverford, PA

Bachelor of Arts in Philosophy and Computer Science, Minor in Mathematics
Departmental Honors in Philosophy and Computer Science
Students' Council Co-President, Sound Technician, Tour Guide, and Saxophonist in the Jazz Band

Theses:

Translating the machine: Rearticulating intelligence and cognition
Understanding functional and equational programming techniques on graph-based problems
